

ABSTRACT

A method, system and tool for allowing abstract communication based on the psychological characteristics of colors. Promoting the emission of messages related to individual's emotional states and giving clear signals that opening doors to verbal communication and welcoming people to surroundings of understanding. Exposing first, the board of magnetic material which illustrates the elements to accomplish non verbal communication and to encourage deeper levels of verbal interaction, a set of multicolored cones which represent the members of the group and some of their psychological factors, a supply of colored indicators that placed on the correspondent cone will create either a message facilitated from the color's significance or simply an attempt to get attention from others. The Sensor will provide features to accurate the message not only giving promptness, with the S.O.S. bar but also offering room for short written messages with the writing board and an erasable marker. The emotional sensor will encourage people to show his or her feelings at the exact moment they would like to express them and the appearance of the board will be the visual testimony of the group's commitment with communication.
